Toronto, ON

SKILLS

AWS · Kubernetes (EKS) · Terraform · Helm · Argo CD · GitHub Actions · Docker · Python · Go · Datadog · HashiCorp Vault · SOC 2 controls · Incident management

EDUCATION

Advanced Diploma, Computer Systems Technology
Lakeshore College of Applied Technology
2020

CERTIFICATIONS

· AWS Certified DevOps Engineer – Professional

· HashiCorp Certified: Terraform Associate

PROFESSIONAL SUMMARY

DevOps engineer with six years building cloud platforms and delivery pipelines for fintech and ecommerce teams. Runs production Kubernetes on AWS with Terraform and GitOps, designs CI/CD that developers trust, and leads incident reviews that fix causes rather than symptoms. Comfortable owning SOC 2 evidence and cloud cost work.

PROFESSIONAL EXPERIENCE

DevOps Engineer

May 2022 — Present

Kingsway Payments · Toronto, ON

- Moved 35 services from hand-managed EC2 hosts to EKS with Helm charts and Argo CD, letting product teams deploy on their own several times a day.
- Rebuilt CI in GitHub Actions with reusable workflows, test caching and image scanning, shortening average pipeline time from 25 minutes to eight.
- Wrote Terraform modules for VPCs, databases and IAM that every new service now uses, removing console changes and passing the SOC 2 audit without findings on infrastructure.
- Led blameless reviews for major incidents and drove fixes such as connection pooling and autoscaling rules, reducing repeat pages for the payments API.

Cloud Operations Engineer

Jul 2020 — Apr 2022

Harbourview Retail Online · Mississauga, ON

- Containerized the storefront and order services with Docker and migrated them to ECS, ending server drift between staging and production.
- Set up Datadog dashboards and alerts before the holiday peak, giving the team early warning on checkout latency and database load.
- Cut the monthly AWS bill by about $9,000 by rightsizing instances, adding savings plans and cleaning unused snapshots.
