Ahmed Siddiqui

Data Analyst | Business Intelligence Intern

ahmed.siddiqui@email.example • (737) 555-0108

PROFESSIONAL SUMMARY

Data analyst moving into data engineering, with two years building SQL models and automating data loads for a regional healthcare provider. Writes Python and dbt, schedules pipelines in Airflow and cares about tests that catch bad data before dashboards do. Holds the AWS Certified Data Engineer – Associate and builds pipelines in a public repository.

EXPERIENCE & PROJECTS

Hill Country Family Health · Austin, TX **Jul 2024 — Present**

Data Analyst

- Rebuilt 25 reporting queries as tested dbt models in Snowflake, giving clinic dashboards one shared definition of visits, no-shows and provider hours.
- Wrote an Airflow pipeline that loads daily scheduling exports from S3, replacing a manual morning upload and making dashboards ready before clinics open.
- Added dbt tests for nulls, duplicates and late files, alerting the team to two broken source feeds before managers saw wrong numbers.
- Worked with the compliance officer to mask patient identifiers in analytics tables, following HIPAA minimum-necessary rules for each report.

Lone Star Building Materials · Round Rock, TX **May 2023 — Aug 2023**

Business Intelligence Intern

- Automated a weekly sales report with Python and SQL, saving the sales operations team several hours of spreadsheet work each week.
- Documented source tables and definitions for the sales data mart, which the BI team used to onboard new analysts.

Open transit data pipeline (public GitHub repository)

- Built a pipeline that ingests real-time transit feeds into DuckDB and Parquet with Dagster, adding dbt models, data tests and a small dashboard of delays.

EDUCATION

BS, Management Information Systems **2024**

Central Texas State University

SKILLS

Technical: SQL, Python, dbt, Airflow, Snowflake, AWS (S3, Glue, Lambda), Data modeling, Data quality tests, Git, Docker, Tableau, PostgreSQL

Certifications: AWS Certified Data Engineer – Associate
