SKILLS

- TypeScript
- React
- Next.js
- TanStack Query
- Zustand
- GraphQL and Apollo Client
- CSS Modules
- Storybook
- Playwright
- Jest
- Core Web Vitals
- WCAG 2.2 AA
- Feature flags

EDUCATION

BS, Informatics
Puget Sound Technical University
2019

PROFESSIONAL SUMMARY

Frontend engineer with six years building B2B SaaS interfaces in React and TypeScript. Owns the scheduling experience for a workforce management product used by hospital and retail staff, with a focus on complex form state, interaction performance and accessible data grids. Works daily with product designers and backend engineers to scope and ship features end to end.

PROFESSIONAL EXPERIENCE

Frontend Engineer II

Mar 2022 — Present

Shiftwise Labs · Seattle, WA

- Rebuilt the weekly shift calendar with row virtualization and memoized cells, so managers scrolling hundreds of employees no longer see the grid freeze.
- Moved server data from hand-written Redux slices to TanStack Query, removing duplicate fetches and stale-data bugs reported by support every sprint.
- Led an accessibility pass on the scheduling grid, adding roving tab index and screen reader labels so keyboard users can assign shifts without a mouse.
- Improved interaction to next paint on the shift editor by splitting heavy validation into deferred work, measured with real-user monitoring after each release.

Frontend Developer

Jul 2019 — Feb 2022

Rainier Ticketing Co. · Seattle, WA

- Built the seat selection map for concert venues in React and SVG, with zoom, keyboard selection and clear price tiers on small phone screens.
- Introduced Storybook and visual regression snapshots for checkout components, giving designers a place to review states before code reached production.
- Cut the checkout bundle by lazy-loading the venue map and replacing a large date library, improving load time on slower mobile connections.
