

Hana Yoshida-Brooks

Junior Full Stack Developer | Veterinary Technician

hana.yoshidabrooks@email.example • (303) 555-0132

PROFESSIONAL SUMMARY

Full stack developer in her first engineering job at a seed-stage company, shipping features in Next.js, Node.js and PostgreSQL from schema migration to finished screen. Bootcamp graduate who spent four years as a veterinary technician, so she writes software with busy, non-technical users in mind and checks her work with them before calling it done.

EXPERIENCE & PROJECTS

Pawprint Clinic Software · Denver, CO

Jul 2025 — Present

Junior Full Stack Developer

- Shipped vaccine reminder settings end to end: a Prisma migration, two Express endpoints and a React settings page clinics now use to schedule reminders.
- Added server-side search for the patient list with PostgreSQL trigram indexes, replacing a client-side filter that froze for clinics with large records.
- Sat with front-desk staff at two pilot clinics to watch the check-in flow, then removed three steps and shipped the simpler version the same sprint.

Cherry Creek Animal Hospital · Denver, CO

Jun 2021 — Mar 2025

Veterinary Technician

- Handled intake, records and client communication in a practice management system daily, learning firsthand where clinic software slowed staff down.
- Trained new technicians on charting and inventory procedures, writing a short visual guide still used by the front desk.

Shared grocery list (Next.js, PostgreSQL, WebSockets)

- Built a real-time shared list app with magic-link login, optimistic updates and row-level access rules, deployed with a seeded demo account for reviewers.

EDUCATION

Certificate, Software Engineering Immersive

2025

Mile High Coding School

SKILLS

Technical: TypeScript, React, Next.js, Node.js, Express, PostgreSQL, Prisma, Tailwind CSS, REST APIs, Jest, Git, Render and Vercel
